Product - AVT-40®

Product Data

AVT-40® is a disinfectant and detergent compound based on quaternary ammonia and chemical enhancers for veterinary and industrial use and available in 1, 5, 20 and 50-liter packs.

This product was created by the research and development sector of POLY SELL® aiming to obtain a disinfectant compound with high germicidal action and outstanding detergent power, as well as other desirable characteristics that were successfully achieved in AVT-40®:

Advanced Formula

High germicidal and detergent power.

Safety

AVT-40® is a highly safe product, since the compounds used in its formula are approved for use in cleaning and disinfection of food industries by the FDA. - Food And Drug Administration.

Eco-Friendly (Biodegradable) Product:

Differentiated formula that reduces possible impacts to the environment.

Excellent Cost-Benefit Ratio:

High efficiency with low cost.

Poultry Farming

Cleaning of sheds: AVT-40® at a dilution of 1:1000. Use water under pressure (no need to rinse).

Cleaning and disinfection of equipment (feeders, drinking troughs, etc.): wash and disinfect equipment with AVT-40® at a dilution of 1:1000.

Disinfections of facilities: use AVT-40® at a dilution of 1: 1000. Wet the entire facility. In case of high viral challenge, use AVT-450® or POLY-PHEN®.

Cleaning of hanging drinking troughs during breeding: add 10 ml of AVT-40® in a bucket with 10 liters of water.

Wash and disinfect the hanging drinking troughs.

Cleaning the water tank and system: drain the tank, clean the entire inner surface, refill the tank and add 1 liter of AVT-40® for every 500 liters of water. Fill the entire system, allow it to rest and drain in 12 hours.

Pig Farming

Cleaning of sheds: apply AVT-40® at the dilution of 1:1000. Use water under pressure (no need to rinse).

Cleaning and disinfection of equipment (feeders, drinking troughs, etc.): wash and disinfect equipment with AVT-40® at a dilution of 1:1000. - Disinfection of facilities: Use AVT-40® at a dilution of 1:1000. Wet the entire facility. In cases of high viral challenges, use AVT-450® or POLY-PHEN®.

Cleaning the water tank and system: drain the tank, clean the entire inner surface, refill the tank and add 1 liter of AVT-40® for every 500 liters of water. Fill the entire system and drain in 12 hours.
