Product - AVT-GEL®

Product Data

AVT-GEL® is a highly effective biocidal agent, suitable for disinfection of the hands in any areas where this process is necessary. Dry antiseptic gel for hand hygiene, AVT-GEL® does not require rinsing, eliminates 99.99% of microorganisms harmful to the skin without damaging the natural flora. Contains emollients that prevent dryness and moisturize the hands. Available in 5-liter carboy.

Antiseptic Efficacy: proven action against ***Staphylococcus aureus***, ***Salmonella s.p.*** Compared to the common alcohols on the market, it has greater biocidal power and a greater action spectrum.

Prevents cross-infection: eliminates the transmission of bacteria through the hands or contact with contaminated surfaces, reducing the possibility of contamination.

Formula with moisturizer: contains emollients for rehydration of the hands, avoiding the dryness caused by the constant use of common alcohol gel.

ANVISA: AVT-GEL® is registered in accordance with the strict standards of ANVISA (Ministry of Health).

Advanced Formula: formulated with high-quality raw materials, AVT-GEL® offers transparency and consistency ideal for use, with higher yield.

For proper hand hygiene

- 1- Apply AVT-GEL® on the hands.
- 2- Rub the palms of your hands and thumbs.
- 3- Rub the back of your hands with your fingers intertwined.
- 4- Rub your fingertips at the joints of the phalanges.
- 5- Rub your wrists with your hands. 6- There, your hands are sanitized and moisturized.

NOTE: With every four sequential uses of AVT-GEL® (at 15-minute intervals), it is recommended to wash the hands with Deter Sell® CID shampoo and antiseptic liquid soap.

WHERE TO USE

Poultry Farming

Collecting eggs for consumption: using AVT-GEL® during egg collection reduces the level of contamination of eggs, improving the quality of the final product.

Hatcheries: use AVT-GEL® during egg classification, reducing the level of contamination and improving productivity in hatcheries.

Heavy and light breeder farms: using AVT-GEL® during egg collection reduces the level of contamination of the eggs, even for **Salmonella**, improving the quality and productivity of hatcheries.

Vaccination: the use of AVT-GEL® is highly recommended prior to preparation of the vaccines.

General Use: Use AVT-GEL® in all operations where dry sanitization is required.

Pig Farming

Maternities and nurseries: the use of AVT-GEL® is highly recommended for hand asepsis in all procedures where dry antisepsis is required.

Vaccination: the use of AVT-GEL® is highly recommended prior to preparation of the vaccines.

General Use: Use AVT-GEL® in all operations where dry sanitization is required.
