## Product - POLY TEK-121®

### Product Data

POLY TEK-121® is a chlorinated alkaline product with high cleaning capacity, exclusively developed for the cleaning of vaccination machines with "in-ovo" technology.

POLY TEK-121® does not require rinsing, does not leave residues and prevents the formation of crusts.

The performance of POLY TEK-121® will continue to be observed even in very hard, hot or cold waters.

The pH of the POLY TEK-121® is between 10.5 and 12.0 when formulated at the dilutions in use.

POLY TEK-121® at the recommended dilutions can be used safely on hard, soft surfaces, including on: stainless steel, aluminum, galvanized iron, plastic and rubber boxes.

POLY TEK-121® stabilized the product provides at least 10 ppm of active chlorine when mixed at the recommended dilutions.
